PROFESSIONAL SUMMARY

Junior Frontend Developer focused on React and TypeScript, experienced in building responsive, accessible, high-performance interfaces from wireframes and Figma designs. Strong foundation in HTML, CSS (including CSS Modules), and JavaScript ES6+, integrating RESTful APIs via fetch/async-await, handling JSON, and version control with Git/GitHub. Familiar with state management patterns (React Context API, Hooks) and eager to deepen Redux knowledge. Proactive communicator, self-motivated, and proven ability to work independently in remote environments, collaborate with designers and backend developers, and contribute to code reviews.

PROJECT EXPERIENCE

Cine Explorer — *Movie Search Application (React)*

- Built a Single-Page Application (SPA) integrating the TMDB RESTful API, delivering instant search results with zero page reloads.
- Implemented routing with React Router and centralized state management (Hooks), improving navigation efficiency.
- Engineered a responsive, mobile-first UI, optimizing performance and user experience across devices.

Eterna Beauty — *Salon Web Platform (React + SCSS)*

- Architected reusable React.js components and modular styles (SCSS / CSS Modules), accelerating UI development and improving code maintainability.
- Reduced mobile page load times by applying front-end performance techniques and efficient CSS layouts.

YumTrack — *Web Health & Nutrition Application (JavaScript ES6+)*

- Engineered a fast, zero-dependency tracking application using pure JavaScript (ES6+) to maximize runtime performance.
- Implemented persistent client-side state with LocalStorage and data fetching with robust error handling (try/catch, async/await).

TECHNICAL SKILLS

Languages & Frameworks: HTML5, CSS3, JavaScript (ES6+), TypeScript, ReactJS, npm

State & Routing: React Hooks (useState, useEffect), Context API, React Router; Redux concepts (actively learning)

Styling & UI: CSS Modules, SCSS, responsive design (mobile-first), cross-browser layouts, Figma-to-code translation

APIs & Data: RESTful API integration, JSON, fetch, async/await, error handling, LocalStorage

Tools: Git, GitHub, Vite, Netlify, DevTools (debugging & manual testing)

Best Practices: Clean, documented code, SEO principles, collaborative version control, code reviews

EDUCATION

Front-End Development Bootcamp — EducaciónIT, 2024

Front-End Development Bootcamp — Coderhouse, 2023

LANGUAGES

Spanish: Native | English: Intermediate (B1)
